SEWERAGE of LONDON.—The attention of the COMMISSIONERS appointed to determine upon the most efficient material for the Construction of the Sewers of London is particularly directed to the ASPHALTE of SEYSSEL, which, more than any other material, is applicable to the construction and internal coating of brick culverts, and other channels for drainage. The experiments made by the Royal Artillery on the Embankments of Plymouth Citadel, constructed of Seyssel Asphalted Brickwork, under the orders of the Honourable Board of Ordnance, have fully proved the superiority, impermeableness, and strength of Seyssel Asphalte over all other cement combinations.—A printed account of these experiments can be had on application to J. FARRELL, Secretary, Seyssel Asphalte Company.—Clerkenwell Patent." Established 1838.
Note.—The application of the Asphalte of Seyssel is specially recommended by the Commissioners on the Fine Arts, for covering the ground line of brickwork in marshy situations, and it has been suggested that it would be peculiarly applicable for covering the Arms of closed Graveyards, and for the consecration of Catacombs.

T. W. and J., particularly solicit the attention of architects and builders to the fact that, by the use of their machinery, a very large saving, both of time and money, is effected—no small, indeed, that in many cases they can deliver a well-finished article in Caen stone for less money than it can be obtained in cement, while their wood carving will, in general, be found to stand into close competition with the best kinds of composition ornament.—For patterns and estimates apply at 154, Strand.
